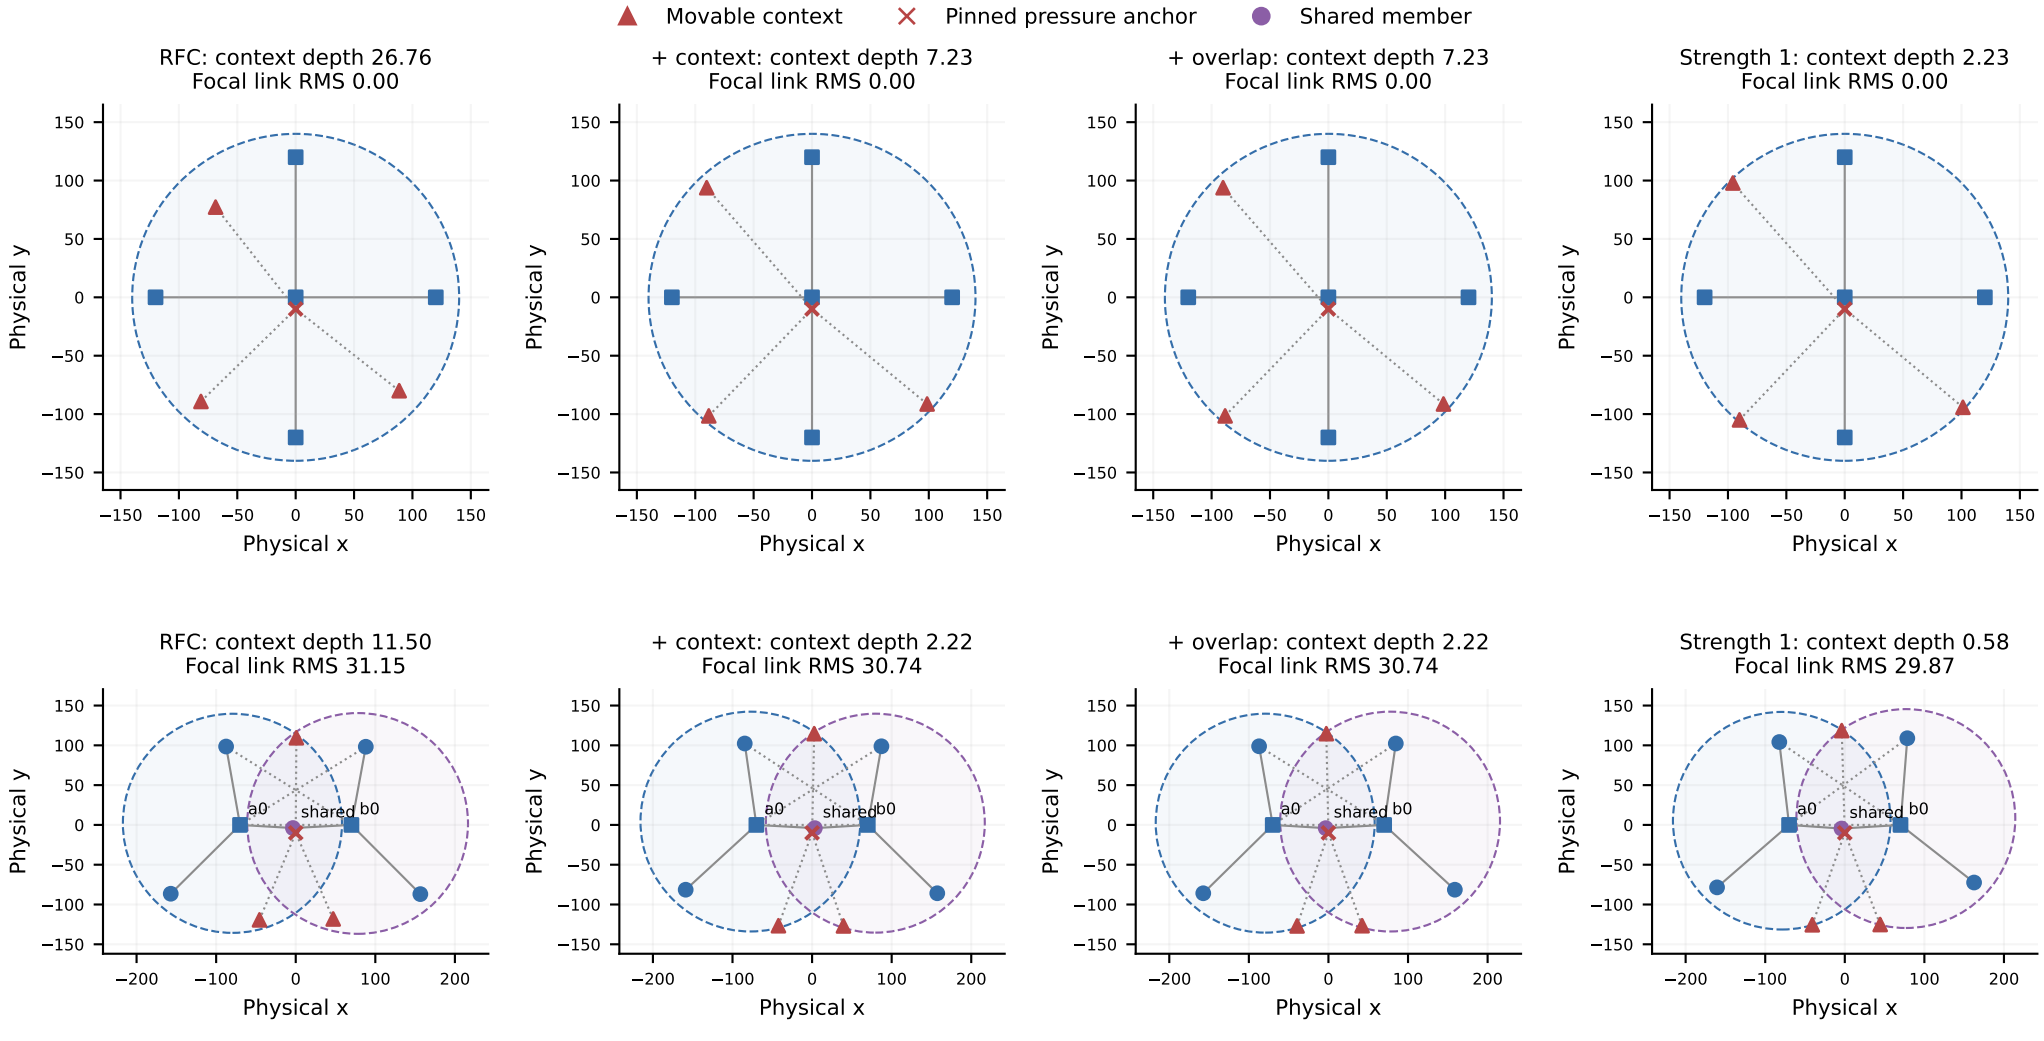
# I2. Identical starts: soft clearing with explicit pinned constraints



I2. First seed 0x1234abcd, final layouts with shared physical axes within each row. Ellipses are measured reference areas in every panel, even with exclusion off. Upper row keeps all focal members fixed; lower row has pinned roots and shared membership. Triangles are movable context; squares are pinned nodes, and the red cross is a pinned non-focal pressure anchor. A soft force cannot expel that anchor. Physical points/straight semantic edges do not measure rendered labels.
